

What happened...

Ottawa Mobile Dev Meetup, July, 2016

Twitter #HelloWorld <https://helloworldberlin.splashthat.com/>
Berlin | June 28, 2016

About:

‘We’re on the road to meet developers, learn about what you’re building and share some of what we’ve been working on. Join team members from Fabric, our modular mobile platform, and GNIP, our enterprise API and data platform, to hear about what’s new and how real-time content can make your app come alive. We’ll also be joined by local industry leaders who will share more about the technologies they’re using to build the best apps and solutions.’

CSS Summit <http://environmentsforhumans.com/2016/css-summit/>

The VIRTUAL CSS AND SASS CONFERENCE EVENT

Cordova iOS 4.2.0 <https://cordova.apache.org/announcements/2016/06/23/ios-4.2.0.html>

jQuery 3.0 Final Released <https://blog.jquery.com/2016/06/09/jquery-3-0-final-released/>

‘jQuery 3.0 is now released! This version has been in the works since October 2014. We set out to create a slimmer, faster version of jQuery (with backwards compatibility in mind). We’ve removed all of the old IE workarounds and taken advantage of some of the more modern web APIs where it made sense. It is a continuation of the 2.x branch, but with a few breaking changes that we felt were long overdue. While the 1.12 and 2.2 branches will continue to receive critical support patches for a time, they will not get any new features or major revisions. jQuery 3.0 is the future of jQuery. If you need IE6-8 support, you can continue to use the latest 1.12 release’
